

Software Engineering Intern (#720179)

Job Description:

In this position, you will be part of a cross-geo team working on Intel OpenCL compiler technologies and performance for the range of IA-based HW platforms. Your responsibilities will include but not limited to design, development, maintenance and performance analysis/tuning for various OpenCL compiler components and validation infrastructure. We're looking for more great software developers who will help us to deliver the future releases of our "Intel SDK for OpenCL applications" product and thus push computing capabilities of Intel platform even further. And who are passionately motivated by seeing their creations used by millions of end users!

Qualifications:

- You should be a fourth year or above student in a software engineering/scientific discipline or equivalent.
- Solid programming skills with C and C++ with minimum 2 years of experience.
- Familiarity with standard software engineering practices for version control, configuration management, testing and root cause analysis.
- Good English skills.
