

## Lab Infrastructure Intern (#716410)

### *Job Description:*

You'll be a part of highly skilled professional team working with 3rd party vendors to win embedded platform designs.

Responsibilities include:

- Order / track sample hardware & software licenses (internal supply)
- Order / track production hardware & software licenses (external supply)
- Working with logistics and finance teams to ensure no issues present
- HW purchase planning according to Intel's roadmap, stock activities
- Provide IT lab support: system builds (client & server, Linux/Windows), network configuration
- Ad-hoc external and internal customer support

### *Qualifications:*

We are looking for younger students who would like to try working at Intel. No specific skills required except:

- Common knowledge of computing hardware components (embedded, mobile, desktop, server)
- Common knowledge of software stacks (firmware, BIOS, OS, drivers, middleware, apps)
- Common knowledge about networks (TCP/IP stack, ethernet)
- Multitasking / discipline / willingness to learn embedded design
- You must have an interest in computer industry to be able to quickly ramp up on day-to-day duties
