Information Society Indicators in the Russian Federation : Data Book. – Moscow : National Research University – Higher School of Economics, 2013. – 288 p.

The data book is the continuation of annual editions of HSE Institute for Statistical Studies and Economics of Knowledge (HSE ISSEK) dedicated to Information Society Statistics. It offers statistical data on goods and services production, employment, investments, research and development, innovation and financial activities in the ICT sector. Data on business tendencies surveys with assessments of level and tendencies of main economic indicators for enterprises rendering computer related services are provided. Some sections contain indicators of ICT usage in business enterprise sector, public authorities, social sector, and households and by individuals. The indicators considered are based on state-of-the art methodological approaches to Information Society Statistics and meet fully the requirements of international statistical standards that allows to complete and provide international comparisons.

The data book includes information of the Federal Service for State Statistics, Eurostat, Rosstat, OECD, UNCTAD, and own methodological and analytical studies and special surveys of HSE ISSEK.
