

A young scholar is not simply a romantic image of a person who is deeply committed to science and research and who takes every opportunity to talk about area of his expertise. Being a scholar also means daily hard work on the way to finding the truth hidden behind this valued status.

The new issue of «That's So HSE» is dedicated to young scholars – our postgraduate students – or rather to their challenging daily work. In this issue postgraduate students tell us about their previous education experience and their decision to enroll in a postgraduate program at HSE; they share their secrets in choosing a guide in the scientific community – their academic advisor – as well as peculiarities of cooperation with advisor; they evaluate conditions created at the university for reproducing scientific knowledge.
