

Syllabus

Lecturer: Andrei V. Dementiev

Class teachers: Andrei V. Dementiev, Ekaterina Kazakova, Anna Rozhkova

COURSE DESCRIPTION

Macroeconomics-2 is a one-semester course delivered in English for the third-year students at ICEF. The course examines the most compelling and influential theories of aggregate output determination, inflation and unemployment in an open mixed economy. It develops students' aggregate thinking by providing a consistent microeconomics-based framework for understanding the main macroeconomic facts and events. The course enables students to employ the proper models to solve macroeconomic problems and justify relevant policies both in the short-run and in the long-run.

PREREQUISITES

Students are required to have good command in Introductory Economics (EC1002) and calculus taught in the first and second years of studies. They are also expected to be familiar with constrained optimization and basic game theory principles. The course itself provides a basis (and so serves as a prerequisite) for such courses as Monetary Economics, International Economics, Development Economics.

COURSE OBJECTIVES

The purpose of the course is to develop the model-based way of 'aggregate thinking' and make students ready to apply relevant macroeconomic tools in their further studies. Specifically the course aims at:

- describing the main factors of aggregate demand fluctuations both in a closed and an open mixed economy;
- explaining the determinants of unemployment and inflation in the short run and in the long run;
- discussing how macroeconomic policy might influence business cycles or long-run growth;
- enabling students to participate in debates on macroeconomic and political matters.

INTENDED LEARNING OUTCOMES

Having completed the essential reading and learning activities, successful students are expected to be able to:

- define the main macroeconomic concepts like GDP, inflation, unemployment, balance of payments, monetary, fiscal, and exchange rate policy;
- describe the models and methods used in the macroeconomic analysis of the short-run fluctuations and the long-run dynamics;

- apply proper analytical models to solve macroeconomic problems and assess the potential and limitations of these models and other methods used in macroeconomic analysis;
- explain and justify positive macroeconomic policy propositions both in written and oral communications and illustrate the relevance of the macroeconomic models through applying good group working practices.

METHODS OF INSTRUCTION

The following methods and forms of study and control are used in the course:

- Lectures (2-4 hours a week).** Attendance at lectures is optional, but it is strongly recommended. Lectures offer a verbal presentation of the material to be mastered. More importantly, they indicate the relative importance of sub-topics and offer approaches to understanding the material that a reading of the notes or textbook sometimes leaves obscure. Those who cannot attend a lecture should endeavour to discuss its content with a fellow student who did attend and to borrow and copy notes. Because of the size of the class, questions and discussion are not encouraged during lectures. If lecture material is unclear, it is best to consult the tutor, preferably during tutorials or the tutor's office hours.
- Classes (2 hours a week).** Class teachers provide an opportunity to discuss lecture material at the beginning or end of their tutorials. The course emphasis is on conducting economic analysis rather than simply establishing a set of facts to be memorised. With this aim, a set of exercises (problem sets) is distributed each week and discussed in tutorials. Students are strongly encouraged to carefully prepare written answers to home assignments in advance of attending tutorials.
- Teachers' consultations.** Unresolved questions on the lecture material can be addressed with tutors on appointment during their consultation times (office hours).
- Self-study.** Before consulting a tutor, however, students are expected to make a serious attempt to solve the problem. Since learning for understanding can only be done by the student lecturers and tutors can do no more than offer advice as to how to go about it. Without prior effort to master a topic on the part of the student, consultation is a wasteful repeat of the lecture experience.
- Written home assignments (problem sets).** A set of home assignments (problem sets) is distributed each week (about 10 in total). Students are strongly encouraged to have completed problem sets. Writing answers to questions before they are discussed in class is the best way to master the course material.
- Use of Internet resources.** One can easily find plenty of useful materials in the Internet by simply typing "interactive macroeconomics" in the search browser. To avoid a waist of time students are recommended to begin with the most suitable links listed in the Learning aids section below.

ASSESSMENT

Formative assessments

- Home Assignments
- Q&A - Questions and Answers
- Class participation

Summative assessments

- Home Assignments (weekly)

- Mock exam (end of March)
- Group work (April)
- Final exam (May)

Students' ILOs are assessed at two broad levels:

- Information-based knowledge is assessed through a set of short questions that have a 'True/False? Briefly explain your answer' format. Students are expected not only to provide an answer but also briefly justify it on the basis of the relevant theory. Full formal derivation of the relevant model is not expected, and often a graphic or descriptive (non-analytical) answer is sufficient.
- Skill-based knowledge (reflecting the ability to adequately use the recognised models when answering long questions).

Intermediate control. Students take the Mock examination in the University of London (UL) examination format. The Mock examination is set in late March or early April by the local teachers, and is graded in accordance with the UL examination rules.

Final control. Students take a three-hour closed book unseen written examination at the end of the course which is designed and checked by the UL examiners.

Students' ability to participate in the debates on macroeconomic issues communicate their ideas to professional audience is assessed via group work.

Group work assessment

Each student is expected to participate in a joint group work on a specific practically relevant topic. The topic is to be chosen by students themselves! The basic idea of this type of learning activity is to build a bridge between the theory and real-life issues and demonstrate relevance and applicability of the analytical approach studied in the course.

The **topic** for presentation has to tackle an interesting and up to date macroeconomic issue discussed in respected general interest newspapers and magazines, such as The Economist, Wall Street Journal, Financial Times, Moscow Times, Ведомости, Коммерсантъ, etc.

The **time limit** for in class presentation is 10 min. There will be a single Presenter that is assigned by the instructor at his/her discretion so each sub-group member should be ready to take charge.

The groups are normally assigned and moderated by the lecturer on the basis of a *stratified randomization* principle to level the playing field. Specifically, students with relatively good, moderate and bad mid-term exam results are mixed in the sub-groups with students having comparable average grades.

Presentation skills (30%) - individual

1. Ability to *attract attention* to the described macroeconomics case;
2. Clarity and suggestiveness (individual skills) = logic and explicitness of the presentation
3. Proper time management (7-10 slides, 10 min).

Analytical skills (70%) - collective

4. Relevance (group work) = ability to *find an interesting* and up to date case on macroeconomic issues in the newspaper/journal, briefly summarize the basic facts and conceptualize the main point/idea/argument/problem/issue using the GEM approach:
 - G-general language (use by ordinary people in everyday conversations),
 - E-economics (definitions, concepts, laws and regularities),
 - M-mathematics (graphs, algebra, econometric regressions)
5. Select the appropriate theoretical model;

6. Identify crucial assumptions that make this theory applicable for the case analysis;
7. Evaluate the trade-off between unnecessary complication and oversimplification of the story;
8. Apply graphical and/or algebraic analysis where appropriate;
9. Formulate the author's propositions and/or conclusions in the language of macroeconomics.
10. Confront the author's statements with the theoretical predictions.

Each *presenter* is assessed individually by the class teacher using the above mentioned complex criteria. Analytical skills contribute 70% to the final grade of the presenter and are primarily assessed on the basis of the **Group Portfolio** that comprises of:

- The original article,
- 7 PPT slides,
- Handouts (up to two pages) with necessary justification of assumption, modelling framework, derivations of proofs, graphs and comments.

Also, analytical skills contribute the same 70% to the Group grade (GG), while the remaining 30% are awarded for discussion skills (QA) to the group as a whole for active participation in a 5 min Q&A session after the presentation. Each group is obliged to prepare 1 question to their peers (3 questions in total) and be sure to answer 3 questions from the class. Each question and answer weighs 5%

Non-presenters get their grades according to the following rule:

$$GG = QA \cdot 0.3 + PG \cdot 0.7 \times N - 1$$

where QA = the grade for discussion skills (ability to pose and answer smart questions)

PG = Portfolio Grade for analytical skills (criteria 4 to 10)

N = Number of sub-group non-presenters who attended the class

Each student will get an Individual Grade IG_i depending on the contributions to the group work, so as:

$$IG_i = \frac{GG}{N}$$

The individual grade IG_i is **decided by the sub-group members** taking into account relative contribution of each participant to the group work. By default or in the absence of consensus among the sub-group members the instructor will award each student in the sub-group list (even if he or she is absent in the day of presentation) with the average grade.

GRADE DETERMINATION

The UL final exam gives 50% of ICEF grade and other 50% is provided by the mock exam (30%), home assignments (10%), and group essay (10%)

LEARNING AIDS

The following resources are available for students to support their learning:

- Lectures slides,
- Essential reading,
- Examiners reports on past exam papers,
- Further reading,
- VLE environment resources.

Lecture slides, lecture notes, marking schemes to previous mock exams as well as home assignments and class plans are regularly uploaded to the course page in the ICEF Information System <http://icef-info.hse.ru/>.

Internet Resources

- ❑ In addition to the subject guide and the Essential reading, it is crucial that you take advantage of the study internet resources that are available online for this course, including the VLE and the Online Library. You can access the VLE, the Online Library and your University of London email account via the Student Portal at: <http://my.londoninternational.ac.uk>
- ❑ Current year materials are regularly posted at the course web-page <http://icef-info.hse.ru/>
- ❑ Russian Federal Educational Portal contains a brilliant collection of various useful links to internet resources in macroeconomics (<http://ecsocman.edu.ru/db/sect/23>). An interactive model of the Goods market equilibrium can be downloaded from <http://www.ecsocman.edu.ru/db/msg/118753>. More advanced students can find it interesting to look through other macroeconomics topics such as Economic growth, Business cycles, Consumption and Investments, Money and Inflation, Unemployment, Open Economy Macroeconomics, Macroeconomics of financial markets, Macroeconomic policy, Applied macroeconomics, as well as New Political Economy in Macroeconomics on <http://ecsocman.edu.ru/db/sect/3156>
- ❑ Companion Website for Blanchard's *Macroeconomics*, the basic textbook for the course, offers interactive Multiple Choice Questions, Essay Topics selected for each chapter of the textbook (27 in total) <http://myphlip.pearsoncmg.com/cw/mpbookhome.cfm?vbookid=388>
- ❑ This site can be used to graphically analyse and explore micro- and macroeconomic theories and concepts. The lessons are interactive and each topic presents subsidiary issues that may be analysed by the student and results are illustrated with a click. Simple Keynesian Cross Model, Consumption and Savings Functions, Goods Market Equilibrium, Supply and Demand for Money, as well as Simultaneous Equilibrium in IS-LM Model are presented on <http://nova.umuc.edu/~black/pageg.html>
- ❑ Wolfram demonstrations project, interactive diagrams (Keynesian cross, IS-LM, Solow Model) <http://demonstrations.wolfram.com/TheParadoxOfThriftInASimpleStockFlowConsistentModel/>
- ❑ The following tutorial is primarily intended to serve as a pathfinder through the tools part of Macroeconomics. Emphasising graphs and animations, it explains the essentials of macroeconomics, shows how the different building blocks are related, and offers interactive numerical exercises. <http://www.fgn.unisg.ch/euro/macro/macroeconomics.html>
- ❑ Videos: There are recorded academic introductions to the subject, interviews and debates and, for some courses, audio-visual tutorials and conclusions.(via VLE)
- ❑ Recorded lectures: For some courses, where appropriate, the sessions from previous years' Study Weekends have been recorded and made available. (via VLE)

COURSE OUTLINE

1. Aggregate demand in a closed economy: the IS-LM model

Goods market and IS curve derivation. Assets market and LM curve derivation. Equilibrium in IS-LM model. Effectiveness of fiscal and monetary policies.

(DFS Ch.9-11, 19; B Ch.3-5; M Ch.10-11)

Further reading

Romer D., Keynesian Economics without the LM curve, *Journal of Economic Perspectives* 14, pp.149-169, 2000.

Hoshi T., A.K.Kashyap, Japan's Financial Crisis and Economic Stagnation, *Journal of Economic Perspectives*, 18 (1), 2004, pp. 3-26.

Ludvigson S.C., Consumer Confidence and Consumer Spending, *Journal of Economic Perspectives*, 18 (2), 2004, pp.29-50.

2. Aggregate demand in an open economy: the IS-LM-BP model

The IS curve in an open economy. The foreign exchange market and exchange rate terminology. The BP curve and capital mobility. Macroeconomic policy under imperfect capital mobility (comparison with perfect capital mobility and capital control). Exchange rate crisis.

(DFS Ch.12, 20; B Ch.18-21; M Ch.5, 12)

Further reading

Calvo G., F.S.Mishkin, The mirage of exchange rate regimes for emerging market countries, *Journal of Economic Perspectives* 17(4), pp.99-118, 2003.

Mann C.L., Perspectives on the US current account deficit and sustainability, *Journal of Economic Perspectives* 16(3), pp.131-152, 2002.

3. Unemployment and the AD-AS model

Labour market: key concepts (labour force, unemployment rate, participation rate).

The types and causes of unemployment: frictional, structural and classical (or real wage) unemployment. Hysteresis.

The aggregate supply (AS) curve. The long run aggregate supply curve and short run AS curve.

Explanations of upward sloping short run aggregate supply curve. Sticky wages (Keynesian) model. Classical worker misperception model, new Keynesian sticky price model, new classical imperfect information model of short run AS. Expectations and short run AS.

The aggregate demand curve. Explanations of the slope.

Equilibrium in aggregate supply- aggregate demand model. Monetary and fiscal policy in the long run and in the short run. Supply shocks.

(DFS Ch.5,7, 10.4; B Ch.6-7, 13; M Ch.6, 9, 11(Appendix), 13.1)

Further reading

Ball L., N.G.Mankiw, The NAIRU in theory and practice, *Journal of Economic Perspectives*, 16(4) pp.115-136, 2002.

Davis S.J., R.J.Faberman, J. Haltiwanger, The flow approach to labour markets: new data sources and micro-macro links, *Journal of Economic Perspectives* 20 (3), pp.3-26, 2006.

Yellen J., Efficiency wage models of unemployment, *American Economic Review*, 74, May, 1984.

Lucas R., Understanding business cycles, in Estrin S., A.Marin, *Essential Readings in Economics*, Chapter 16, MacMillan Press 1995.

Zarnowitz V., Theory and history behind business cycle: Are the 1990s the onset of the golden age? *Journal of Economic Perspectives*, 13(2), pp.69-90, 1999.

4. Inflation and the Phillips curve

Phillips curve. AD-AS model in the long run. Inflation in the long run.

Inflation in the short run. The links between the Phillips curve, Okun's law, and the SRAS relation. The costs and benefits of inflation. The quantity theory of money, and its long-run

implications for monetary policy. The cost of disinflation policy. Rational expectations and Lucas critique.

(DFS Ch.6-7, 11.1-11.2, 19.3; B Ch. 8-9, 14.3-14.4, 22, 25.1; M Ch.4, 13.2)

Further reading

Barsky R.B., L.Kilian, Oil and macroeconomy since the 1970s, *Journal of Economic Perspectives*, 18 (4), pp.115-134, 2004.

Svensson L.E., Escaping from a liquidity trap and deflation: The foolproof way and others, *Journal of Economic Perspectives*, 17 (4), pp.145-166, 2003.

Tobin J., Inflation and unemployment, *American Economic Review*, 62 (1), pp.1-18, 1972.

5. Economic Growth: the Solow model and endogenous theories

Factors of economic growth, Solow residual.

Stylized facts of economic growth.

Assumptions of the Solow model. Derivation of the capital accumulation equation.

Steady state. Comparative statics (predictions of the model): changes in saving rate, in population growth rate, etc.

The golden rule of capital accumulation.

Solow model with labour augmenting technological progress.

Endogenous growth theory.

(DFS Ch.3-4; B Ch.10-12; M 3.2, 7-8)

Further reading

Barro R.J., X.Sala-i-Martin, *Economic Growth*, McGraw-Hill, 1995 (Introduction).

Baumol W., Productivity growth, convergence, and welfare: What the long-run data show, *American Economic Review*, 76 (5), pp.1072-1085, 1986.

Easterlin R.A., The worldwide standard of living since 1800, *Journal of Economic Perspectives*, 14 (1), pp.7-26, 2000.

Charles J., *Introduction to economic growth*, second edition, Norton 2002, Chapters 1-4.

Romer P., The origins of endogenous growth, *Journal of Economic Perspectives*, 8(1), pp. 3-22, 1994.

6. Theories of consumption

Keynesian consumption function and Kuznets puzzle. Intertemporal choice model. Life Cycle and Permanent Income theories. PIH under rational expectations.

Barro-Ricardo equivalence. Reasons for the failure of Barro-Ricardian equivalence.

Fiscal policy. Implications of Barro-Ricardo equivalence.

(DFS Ch.13, B Ch.16, 26.2; M Ch.15.4, 16)

Further reading

Barro R., Are Government Bonds Net Wealth? *Journal of Political Economy*, December 1974, pp.1095-1117.

Hall R., Stochastic Implications of the Life Cycle-Permanent Income Hypothesis: Theory and Evidence, *Journal of Political Economy*, December, 1978.

Modigliani F., Life cycle, individual thrift, and the wealth of nations, *American Economic Review* 76(3), pp. 297-313, 1986.

7. Theories of investment

Yield to maturity and term structure of interest rates. Stock market and the price of stock. Keynesian theory on aggregate investment. The components of investment spending. Neoclassical model of investment. Accelerator models of investment. Tobin's q-theory.
(DFS Ch.14, 18.1-18.2; B Ch.14-16; M Ch.4, 17.1)

Further reading

Hall R., D.Jorgenson, Tax policy and investment behaviour, *American Economic Review* 57(3), pp. 391-414, 1967.

8. Money demand and money supply

Functions of money. The transactions demand (Baumol-Tobin model). The speculative theory of money demand: demand for money as a safe asset. The modern quantity theory of money. The monetary base and the money supply. The money multiplier model. Control of the central bank over the money supply.
(DFS Ch.15-16; B Ch.4; M Ch.4, 18)

Further reading

Baumol W., The transaction demand for cash: an inventory theoretic approach, *Quarterly Journal of Economics*, 66, pp.545-556, 1952.

Tobin J., Liquidity preference as a behaviour towards risk, *Review of Economic Studies*, 25, pp.65-86, 1958.

9. Monetary policy

Aggregate demand (AD) shocks. Responses to AD shocks: non-intervention, activist policy. Time lags (inside and outside). Lucas critique. Policy ineffectiveness proposition. Monetary policy: targets and instruments. Rules versus discretion. Time inconsistency problem. Solutions for time-inconsistency problem: constitutional rules, reputation, delegation to an independent authority with different preferences/incentives (independent central banker). Examples of monetary policy rules.
(DFS Ch.16-17; B Ch.17,23-26; M Ch.4,14-15)

Further reading

Taylor J.B. An historical analysis of monetary policy rules, *NBER working paper*, w6768, 1998 (<http://papers.nber.org/papers/w6768>)

10. Fiscal policy

The simple arithmetic of the government budget constraint. The implications of the Ricardian equivalence proposition for the conduct of fiscal policy. The theoretical underpinnings of fiscal policy and the debate between the active or passive use of fiscal policy. Discretionary use of fiscal policy. The determinants of seignorage, and the links between the budget deficit and inflation. Budget deficits as a source of high inflation.

(DFS Ch.1.9, 19.5-19.7; B Ch.22.3,23; M Ch.5.6,18.2, 19)
