

Special Issue

GREEN ECONOMICS FOR BIODIVERSITY

Issue
2/2021

Submission
Deadline
01.04.2021

Guest Editor — Dr. Vladimir Bocharnikov, Professor, Senior Researcher, Pacific Geographical Institute, Far East Branch of the Russian Academy of Science, Russia

In the new reality, a new perspective and a wider understanding of the role of preserving wilderness areas and biodiversity for the sustainable development are of particular importance. The efforts on effective conservation, careful use of these resources, and the development of appropriate policies, are increasingly relevant.

This special issue focuses on the new approaches to decision-making; economic, technological, social and environmental factors that define developments in this area.

The editors welcome papers with focus on combination of ecology, political ecology, deeper links between nature and humanity, green and sustainable economy tools, bioeconomics, low-carbon economics, climate change economics, etc.

Suggested topics

Suggested contributions include, but are not limited to, the following:

- Foresight studies for the envisioning of green economy until 2050
- Development opportunities and potential threats for the wilderness areas worldwide
- The role of technological, economic, social and environmental factors in preserving biodiversity
- Wilderness and biodiversity protection indices development, and ecosystems services
- Green Economy: new strategies and approaches
- New ideas for Nature conservation and ecosystems services development
- Case studies to guide the wilderness conservation and "Nature Need Half" initiative development
- Business and green finance technologies
- Development of the financial and nonfinancial indicators for the nature and wilderness conservation
- Human footprint: tools for conservation planning at an eco-regional scale
