China and Russia
make science together

Evgeny Terentev:

Why have you chosen Chinese partners for this joint research?

China is characterized by the most dynamic and sustainable growth, which makes it one of global leaders in education. That is why we are interested in China's experience.

Have you already had contacts with Chinese colleagues?

We have been cooperating with Tsinghua University, but this cooperation has been rather spontaneous so far. We researched into the development of higher education. But our participation in the "International Academic Cooperation" competition allowed us to launch a full-fledged joint institutional project.

What is the aim of the study?

The key topic of our research is the transformation of doctoral education in Russia and China. The project aims to analyze the changing landscape of doctoral education in both countries. We want to investigate what has happened to this level of education in the last thirty years, so to speak in the post-Soviet period. We plan to make a comprehensive analysis, collecting data at the national level, at the institutional level, and at the level of individual participants in the educational process. We expect that this evidence-based research will let us make recommendations for developing educational policy at the doctoral level. Such recommendations could be useful not only for particular institutions, but for the educational systems of both Russia and China.

International Academic Cooperation, HSE University

Joint Basic Research Projects

SINCE 2023, A COMPETITION FOR JOINT FUNDAMENTAL RESEARCH PROJECTS HAS BEEN INITIATED.

The Competition shall be held among academic (research) structural subdivisions of HSE University planning to implement joint basic research projects with academic units of international universities and research centres engaged in research topics similar to the academic (research) subdivisions of HSE University.

Our goal:

- development of international scientific collaborations
- expansion of the research agenda and multidisciplinary
- involvement of students in joint basic research projects to improve their culture of academic research
